

QC Storage System

Using the Color Coded Collars

The purpose of this storage system is to keep your gravers, burs, and other tools that use QC Holders organized. To use the color coded collars, follow the directions below.

1. Decide what color of cup you will start with and remove the half circle containing the collars. Snap off one of the collars; be careful because the plastic nub may be sharp. You can file the nub with sandpaper or a fine file.
2. Firmly hold the collar and insert the graver into the hole. This may require additional force because some tools will be a tight fit. Either push the tool into the collar while holding it on a table or use a wrench to firmly but gently push the collar on. Make sure the collar is placed as far up the shaft as possible.
3. Insert the graver with collar into the QC Holder and tighten.
4. Color coordinate all of your tools with matching collars and tool trays.
